

LogViewer

— plugin — description: Allows viewing log contents author : Andreas Gohr email : andi@splitbrain.org type : admin, action lastupdate : 2024-04-04 compatible : (bundled) depends : conflicts : similar : tags : !bundled, logging

screenshot_img: :plugin:logviewer.webp

Since the Igor 2022 release.

The LogViewer can be reached from the [admin window](#) « View Logs» and allows to view the contents of the log files.

The tab at the top allows you to switch between the different logging facilities, a date input lets you pick the day to display, and a filter field lets you do a simple string match based reduction of the viewed entries.

Use the [dontlog](#) configuration setting to disable/enable specific logging. The [logretain](#) setting determines how long these logs are kept.

DokuWiki broken

If the LogViewer cannot be reached, you can find the log files in your file system on `[wiki_folder]/data/log/error/<date>.log`.
